

Hey {manager},

There's a training program called Mastering Systems that I'd love our team to participate in. It's a live, online course run by Marianne Bellotti, author of *Kill It With Fire*, the classic book on legacy modernization and restoring systems to operational excellence. Over the course of three months we'll work on modeling our most complex systems and developing a strategy to finally tackle thorny challenges like {big scary technical problem in your org}.

A few highlights:

- We'll have direct access to Marianne Bellotti and her team of experts who include colleagues from Google, Meta, Anduril, Youtube and Snowflake
- Hands-on working sessions to test new tactics and ideas
- Access to hours of workshops, seminars, and tutorials on advanced architectural and engineering skills included.

I anticipate being able to put my learnings directly into practice during the course. After the course, we'll still have access to all the content on the Bellotti.tech platform free of charge.

The standard course costs \$2,000 USD per engineer. I can attend an open group as an individual, but I'd love to have them do a custom program for us so that we can talk in detail about our challenges. If you like, you can review course details here, including the instructor's bio: <https://bellotti.tech>

What do you think?

Thanks,

{Your Name}
