Wrap - Capture & Edit Beautiful Screenshots

A browser extension for capturing and editing beautifully styled product screenshots.

Pikaso is a fantastic way to turn Tweets into highly creative, colorful and engaging images you can use for outreach, content marketing, curating wisdom, teaching a mini course, or simply adding, embellishing or improving any sort of site where your members are active on Twitter (and you can turn their tweets into "art" in a single click)

Note - you can also repurpose tweets on Instagram (with stories and posts dimensions already set up for you - you simply pick the size you want, and generate)

The "Dropbox" for Creatives Playbook is actually much more than a super cool new organizational tool for creatives, artists, marketers - you can create boards (called playbooks) that will allow to upload PDF's, multi-media files, link to external url's and essentially, deliver restricted content (or post purchase files) to your clients and customers in a very smooth and sexy way. It's currently free - check it out.
